

# Customer Engagement Center

# Overview

The SAP has an existing Cloud Platform for its CRM solution. The product has always faced criticism for its user experience issues and lack of Omnichannel capabilities which is crucial for call centers.

I was assigned to work on a new concept and got support to conduct some research and get some insights from the Product Managers and our Innovation Partners. One year has been passed and my rest of the team joined to realize this product called as Customer Engagement Center.

This document focuses on the process of realizing this concept design to an actual product for SAP Service Cloud.

# Screen: Customer Overview

Problem

Service Agent Michelle's most common frustration from existing product was to find right information about customer at right time.

Solution

This screen provides the 360° view of a customer to Michelle. She can now get customer details, their history, documents, and knowledge articles.

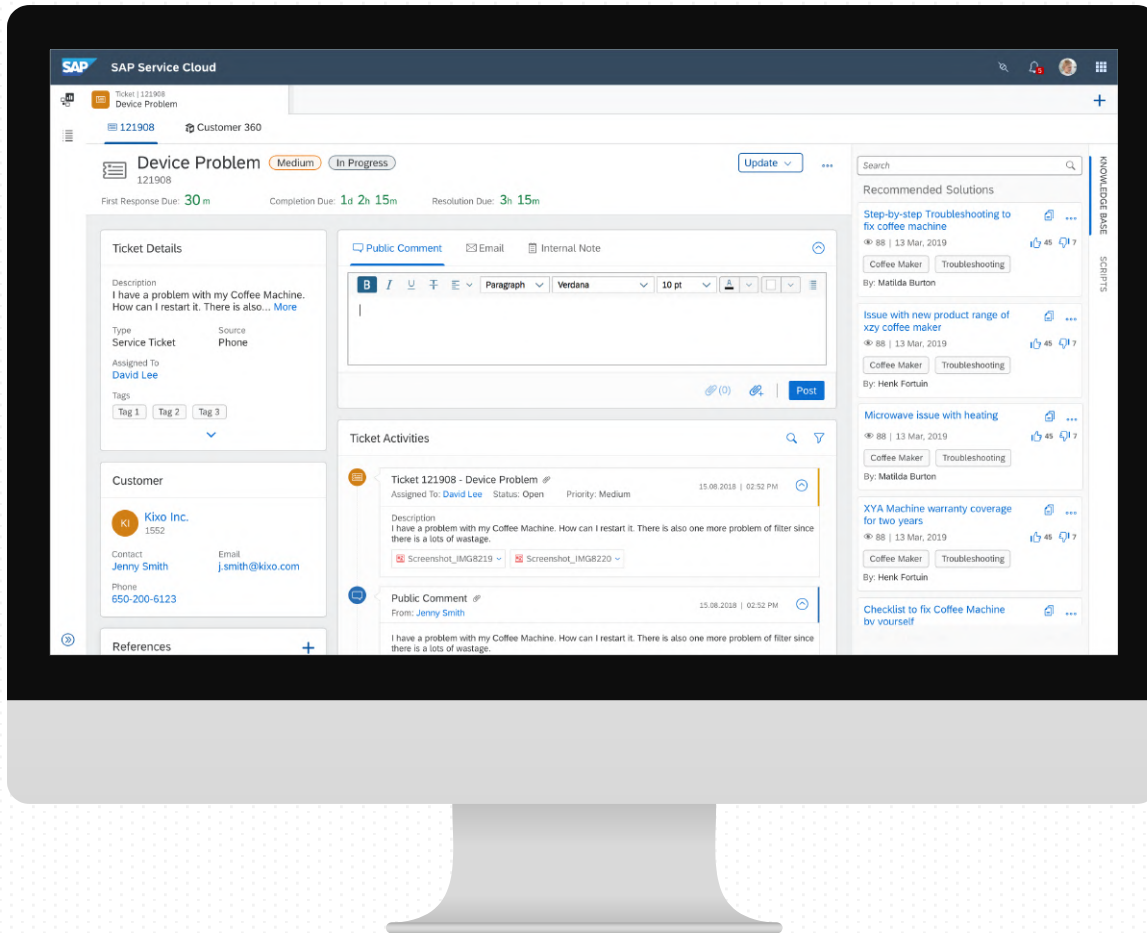

Challenge

In a solution like this which should be able to cater different business process. An administrator should always be able to configure UI as per their need.

# Screen: Business Documents

Problem

Michelle always had a problem to track the activities and information about any business documents like tickets, sales quotes, and sales order.

Solution

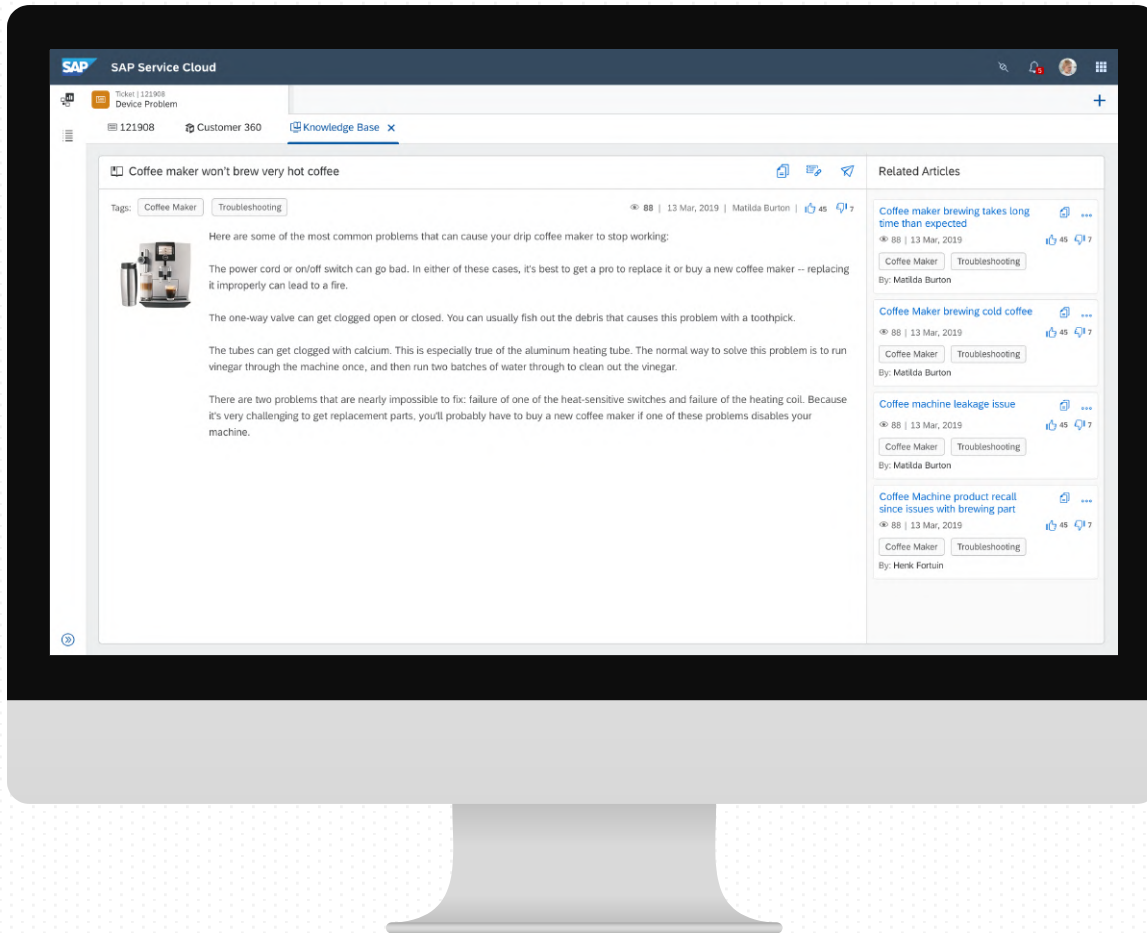

The new business document experience provides all the information including the progress and all the activities in a chronological order.

Challenge

Each document has different piece of information to deal with i.e. a service ticket can't be used for returns. Therefore UI should be configurable for all use cases.

# Screen: Knowledge Base

Problem

Michelle always struggled to find correct solution during her engagement with end consumers. Looking for different source of information is always tedious.

Solution

The new solution makes sure that Michelle gets all the information she needs regardless of which page she is looking at.

Challenge

The future scope for this is to provide well integration in work process i.e. Machine learning should suggest the contextual information as per Michelle's needs.
